

Sustainability Strategy

The logistics industry is an important part of the economy, but it also contributes to global CO₂ emissions. This results in a great responsibility for all stakeholders. In order to reduce the environmental impact, IFB International Freightbridge (Deutschland) GmbH (hereinafter referred to as IFB) has developed a sustainability strategy that focuses on three main objectives:

1. **Carbon management:** IFB focuses on effective carbon management during all operations to reduce CO₂ emissions.
2. **Environmentally friendly solutions:** IFB strives to provide environmentally friendly solutions and offerings to customers to increase the demand for green transportation solutions.
3. **Ecological criteria:** IFB offers, in terms of change of means of transportation in multimodal transport, various options to save CO₂ and use the most efficient means of transportation possible.

IFB is also striving to reduce CO₂ emissions in-house. For example, 60% of our company cars already have a fully or partially electric drive, and we aim to convert our entire fleet to electric and hybrid drive systems by the end of 2024.

IFB also relies on data analysis and training programs to raise and expand employees' environmental awareness.

The responsible handling of waste is also an important component of IFB's sustainability efforts. Ideally, we do not generate waste in the first place. Unavoidable waste is disposed of properly and returned to the circular economy.
